|---|----------------------|------------------|------|
| Use Case No.  | UC001                | Use Case Version | 1.0  |
| Use Case Name   | Make a Booking       |                  |      |
| Author  | Phan Huynh Dang Khoa |                  |      |
| Date  | 14/06/2020           | Priority         | High |
| <b>Actor:</b> <ul style="list-style-type: none"><li>Customer</li></ul>  |                      |                  |      |
| <b>Summary:</b> <ul style="list-style-type: none"><li>This use case allows customers to make a booking.</li></ul>   |                      |                  |      |
| <b>Goal:</b> <ul style="list-style-type: none"><li>A driver is dispatched to pick up the customer.</li></ul>  |                      |                  |      |
| <b>Triggers:</b> <ul style="list-style-type: none"><li>On main screen, the customer clicks on the location search box.</li></ul>  |                      |                  |      |
| <b>Preconditions:</b> <ul style="list-style-type: none"><li>User logged in as Customer.</li></ul>   |                      |                  |      |
| <b>Post Conditions:</b> <ul style="list-style-type: none"><li>A driver is dispatched to pick up the customer.</li><li>Booking's details are shown on the customer's screen.</li></ul> |                      |                  |      |

**Normal flow:**

| Step | Actor Action  | System Response   |
|------|---|---|
| 1    | Customer inputs the start location to the "From" box.                     | System marks the start location on the map.<br>[Exception 1]  |
| 2    | Customer inputs the end location to the "To" box.                         | System marks the end location on the map.<br>[Exception 1]  |
| 3    | Customer chooses a vehicle from the registration list.                    | System shows the distance and price for the trip.<br>[Exception 2]  |
| 4    | Customer confirms the booking, then clicks on the "Start booking" button. | <ul style="list-style-type: none"><li>- System searches for nearby drivers and waits until one accepts the request.<br/>[Exception 3]</li><li>- When a driver accepts the request, the system dispatches that driver to the customer.</li><li>- System displays the booking's details on the customer's screen.</li></ul> |

**Alternative flow:**

&lt;N/A&gt;

**Exceptions:**

| No. | Exception Detail                                  | System Response   |
|-----|---|---|
| 1   | Customer inputs a location that does not exist.   | System shows message "The location cannot be found".                  |
| 2   | No vehicle is available in the registration list. | System shows message "You must register a vehicle to make a booking". |
| 3   | No driver near the customer is available.         | System shows message "No driver is available".                        |

|  |  |  |
|--|--|--|
|  |  |  |
|--|--|--|

**Relationship:**

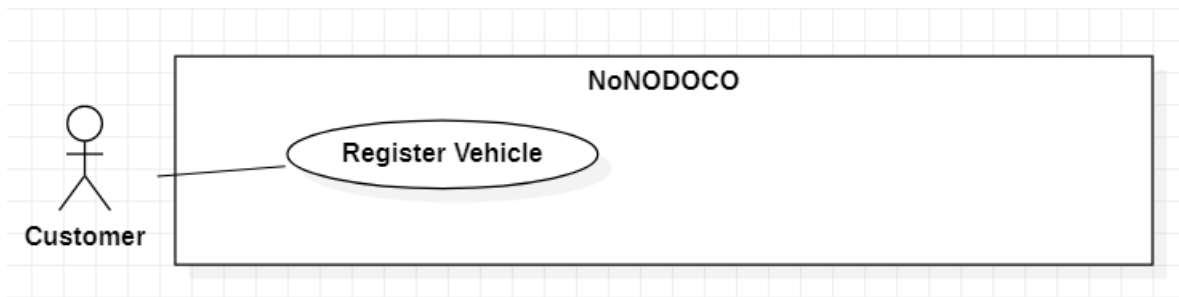

- Extends to "View Driver's Information"

**Business Rules:**

- Price's calculation for a booking:
  - Motorbikes:
    - Under 1km: 20.000 VND
    - From 1km onwards: Distance (minus the first km) \* 15.000 VND
  - Cars:
    - Under 1km: 30.000 VND
    - From 1km onwards: Distance (minus the first km) \* 22.000 VND
- When searching for a driver, system searches within the radius of 2km.
- When a driver has accepted the booking, the booking is stored in the database with the status "New".

## 2. <Customer> Register Vehicle

### Use Case Diagram

### Use Case Specification

| USE CASE - UC002   |                       |                  |      |
|--|-----------------------|------------------|------|
| Use Case No.   | UC002                 | Use Case Version | 1.0  |
| Use Case Name  | Register Vehicle      |                  |      |
| Author   | Nguyen Ngoc Quynh Nhu |                  |      |
| Date   | 14/06/2020            | Priority         | High |
| <p><b>Actor:</b></p> <ul style="list-style-type: none"><li>• Customer</li></ul> <p><b>Summary:</b></p> <ul style="list-style-type: none"><li>• This use case allows customers to register a vehicle.</li></ul> <p><b>Goal:</b></p> <ul style="list-style-type: none"><li>• A vehicle is registered.</li></ul> <p><b>Triggers:</b></p> <ul style="list-style-type: none"><li>• Customer clicks on the "Register Vehicle" button.</li></ul> <p><b>Preconditions:</b></p> <ul style="list-style-type: none"><li>• User logged in as Customer.</li></ul> <p><b>Post Conditions:</b></p> <ul style="list-style-type: none"><li>• Registered vehicle's information is stored in the database.</li><li>• System shows a successful message with the registered vehicle's information.</li></ul> |                       |                  |      |

**Normal flow:**

| Step | Actor Action  | System Response   |
|------|---|---|
| 1    | Customer clicks on the "Register Vehicle" button.             | System displays a form for the customer to fill in the following information: <ul style="list-style-type: none"><li>• Vehicle's brand (required)</li><li>• Vehicle's color (required)</li><li>• License plate (required)</li><li>• Vehicle's insurance number (required)</li><li>• Vehicle's registration certificate number (required)</li></ul> |
| 2    | Customer fills in the form and clicks on the "Submit" button. | <ul style="list-style-type: none"><li>- System verifies the form.<br/>[Exception 1]</li><li>- System stores the vehicle's information in the database.</li><li>- System shows the message "Vehicle was registered successfully" with the vehicle's information on the customer's screen.</li></ul>  |

**Alternative flow:**

&lt;N/A&gt;

**Exceptions:**

| No. | Exception Detail                                    | System Response   |
|-----|---|---|
| 1   | One of the required form's fields is not filled in. | System shows message on the corresponding field "This field is required". |

**Relationship:**

&lt;N/A&gt;

**Business Rules:**

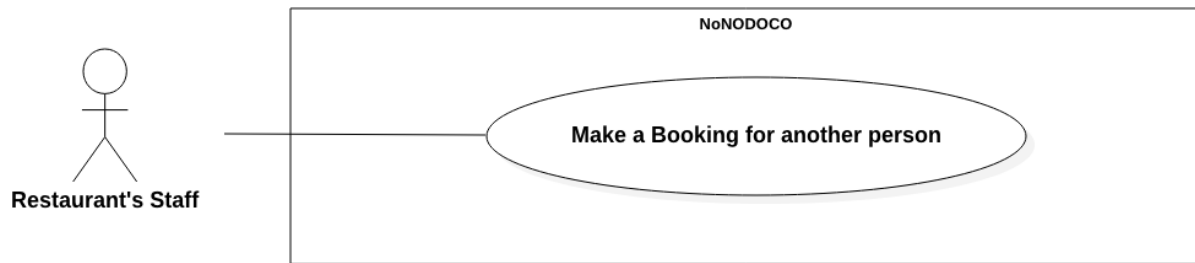

- After a customer has successfully registered a vehicle, the status of the vehicle is "Verifying".
- When the admin has verified the vehicle and it is a new one, the status of the vehicle is set to "Active".
- When the admin has verified the vehicle and it already existed in the database but is

owned by a new customer, the status of the vehicle is changed from "Inactive" to "Active".

### 3. <Restaurant's staff> Make a Booking for another person

| <b>Goal:</b> <ul style="list-style-type: none"><li>The booking is finished and the main driver drops off the customer.</li></ul>   |                  |                  |      |
| <b>Triggers:</b> <ul style="list-style-type: none"><li>Main driver clicks on the "Pick up" button.</li></ul>   |                  |                  |      |
| <b>Preconditions:</b> <ul style="list-style-type: none"><li>User logged in as Main driver.</li><li>The booking is not cancelled by the customer.</li><li>The drivers have confirmed the booking.</li></ul> |                  |                  |      |
| <b>Post Conditions:</b> <ul style="list-style-type: none"><li>System shows message indicating that booking is finished.</li></ul>  |                  |                  |      |

**Normal flow:**

| Step | Actor Action   | System Response  |
|------|--|--|
| 1    | Driver begins taking the customer to the destination.                  | System updates the status of booking from "New" to "Process".<br><br>System continuously updates the driver location on the map.                                     |
| 2    | Driver arrives at the destination and clicks on the "Drop off" button. | System updates the status of booking from "Process" to "Success".<br><br>System shows the bill of the booking on both the customer's screen and the driver's screen. |
| 3    | Driver clicks on the "OK" button.                                      | System redirects to the main screen.   |

**Alternative flow:**

&lt;N/A&gt;

**Exceptions:**

&lt;N/A&gt;

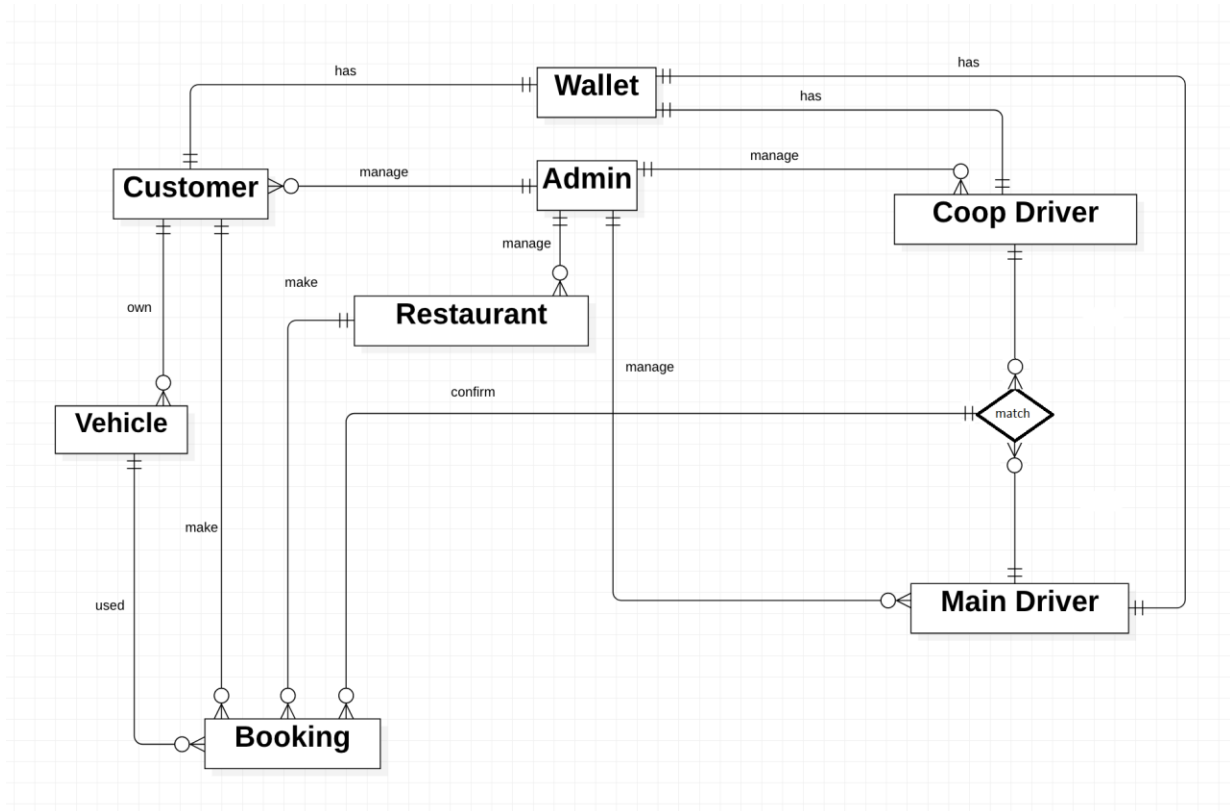

**Relationship:**

- Includes "Confirm a Booking"

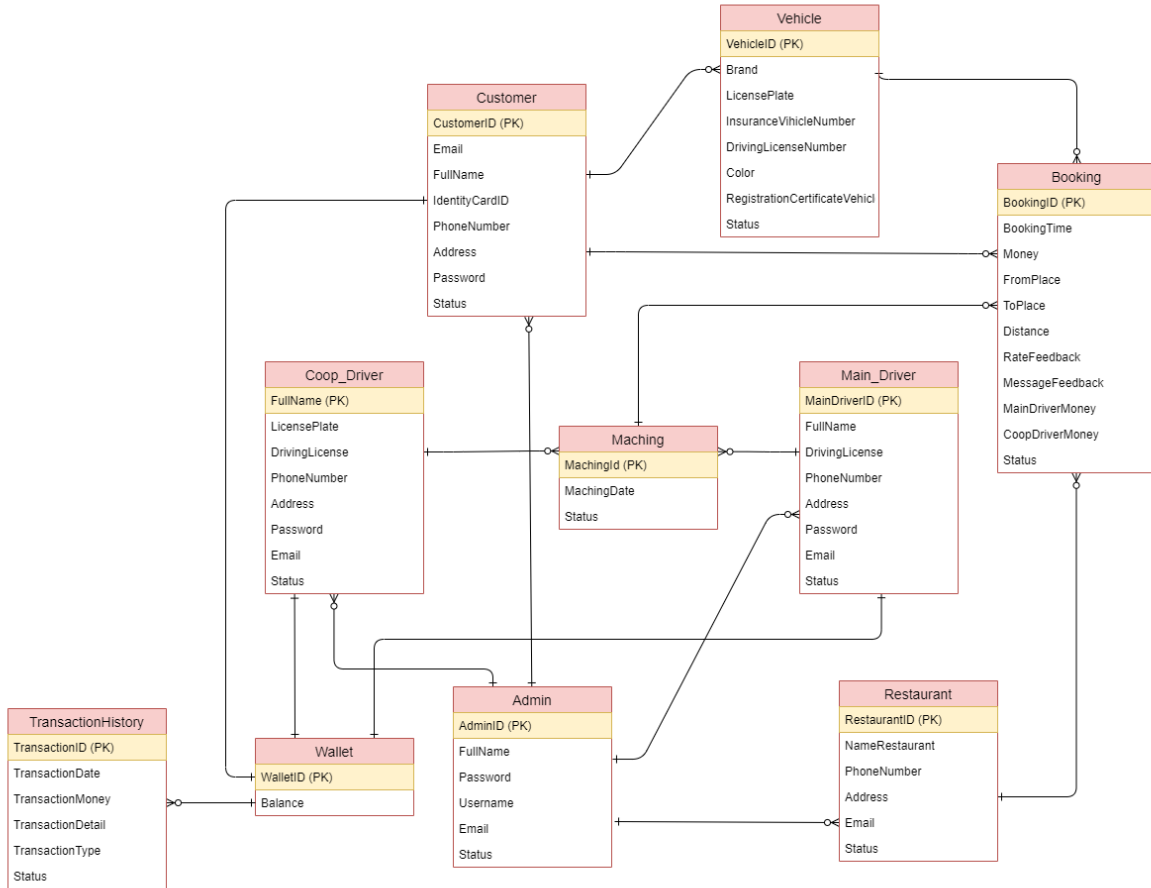

**Business Rules:**

- The money that each driver will receive:
  - Main driver: 60%
  - Coop driver: 40%
- When the driver goes back to the main screen, the money of his wallet is updated according to the received money.
- If the customer pays in cash, system will subtract 20% (of the money each driver receives) FROM the wallet of each driver.
- If the customer pays through wallet, the money is subtracted from the customer's wallet to the drivers' wallets (based on the ratio of 60/40). System will subtract 20% (of the money each driver will receive) from both drivers' wallets.
